more

Data Security

Our data centers employ the latest in physical and virtual security technology elements.

Product Features at a glance:

- Integral Microsoft license management
- Data centers owned and managed by Matrix
- Flat rate installation and configuration
- Integral user Internet access management
- Free support with live 24/7 Emergency Support
- Integration of legacy and new applications
- We are not a reseller - we develop, maintain, and support our own systems and data centers
- Scalability - From single servers to hundreds of locations

Who are we?

We are Matrix, a computing services resource founded in 1998 to offer growing businesses a big business computing experience. Taking care of your growth and solution integration needs is our business.

What do we do?

We design, implement and support DataServe, a hosted local and wide area computer network solution. DataServe takes the onus of managing users, workstations, servers, connectivity and applications off your personnel so they can concentrate on revenue generating activities.

Why do you need DataServe?

Enhanced security: DataServe utilizes many layers of physical and virtual security initiatives typically used only by Fortune 500 companies to ensure the utmost in data protection.

Effective user management: Advanced system management tools keep users productive and away from sensitive areas.

Increased performance and reliability: DataServe's foundation is built on redundant, failsafe server farms, multiple power sources and connectivity and 24/7 certified technical support.

Lower total cost: Purchasing only the resources you need, when you need them means your business isn't paying for unneeded capacity.

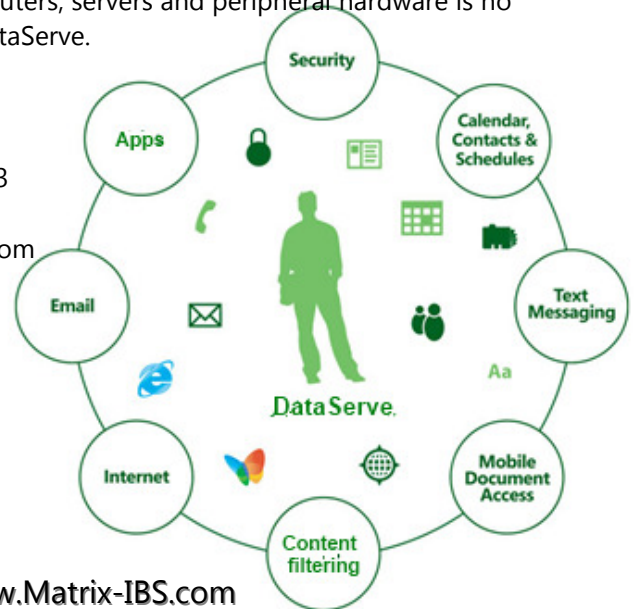

How does DataServe cost compare to an in-house network?

DataServe can provide a lower total cost of ownership due to economies of scale associated with a shared system infrastructure. Investing and re-investing in personal computers, servers and peripheral hardware is no longer necessary with DataServe.

How can I contact Matrix?

Integrating Business Solutions

Lines of Business

DataServe® application hosting, network management and user support

- Comprehensive wide and local-area network outsourcing
- User helpdesk solution
- Instant scalability in dedicated or shared, virtual environments
- Increase system performance and lower total cost

DataSecure® systems replication, data backup and disaster recovery

- Enterprise-grade data security
- Replication and backup solutions
- Virtual machine-based failover
- Cost-effective daily backup /restore for servers, PCs and laptops

HIS® health information systems implementation, training and support

- Featuring CCHIT-certified gloStream practice management and electronic medical record software
- ePrescribing and voice recognition
- Fully managed server installations

Matrix Assure® remote system management and support

- System security management and monitoring
- Patch management
- Network policy enforcement
- Backup and disaster recovery

MatrixConnect® DNS, website, email hosting

- Featuring Microsoft Exchange Server and MX Logic spam/virus filtering
- Long-term email archiving
- User Internet access management/monitoring
- Website hosting and management
